

## Harman Kardon Premium Sound

The goal of this system is to provide elegant, refined simplicity that allows the listener to enjoy the accurate sound Harman Kardon is famous for.

### Key Features:

**8-channel/8-speaker system** powered by a Class-D digital amplifier delivering 400 watts of precision power in a lightweight package

**Tuned using Dirac**, the technology used to refine movie theater sound systems, all speakers work together to create a tight, punchy bass full of detail without harshness or fatigue, a large improvement over the typical boomy, non-directional bass often experienced in lesser systems

**HALOsonic® iESS** enables sound contouring inside the car by enhancing speed, acceleration, and throttle-dependent sounds through the speaker system (gas only vehicles)

**Smart Speed Dependent Volume Control** optimizes the gain of each individual channel proportionally to vehicle speed to mask associated noise and reduces the need to adjust the volume control while driving
